

Dr. Christina Kyrousi is an Assistant Professor of Biology and Neurobiology at the First Department of Psychiatry, Medical School of the National and Kapodistrian University of Athens, Greece (NKUA), and an affiliated researcher at the University Mental Health, Neurosciences and Precision Medicine Research Institute “Costas Stefanis” (UMHRI). She received her BSc in Biology, MSc in Neurosciences, and PhD in Basic Medical Sciences / Neurosciences from the University of Patras, Greece, graduating with distinction. She then completed postdoctoral research at the Max Planck Institute of Psychiatry in Munich, Germany, where she specialised in developmental neurobiology and human brain organoid models.

Dr. Kyrousi has an excellent track record, with numerous invited lectures at national and international conferences, competitive national and international research grants (amongst which two HFRI grants, Fondation Sante and EMBO IG grant), and publications in leading scientific journals, including *American Journal of Psychiatry*, *Cell*, *EMBO Molecular Medicine*, *Nature Communications* and *Nature Medicine*. Her work has received international recognition and focuses on human brain development, neurodevelopmental, neurological, and psychiatric disorders by uncovering the cellular and molecular mechanisms underlying these conditions, using animal models, human stem cells and human brain organoids.
